

Product: Noga Camera Arms: NF Series

The Noga Camera Arm range utilise a 3 jointed fully articulated holding system which provides safe and easy positioning of photographic and cine bolt on accessories such as lights and monitors

The heart of the device is a single central locking knob which locks all 3 joints simultaneously

The central locking mechanism has a smooth action and can be tightened to hold the fitted accessory firm enough to support it but to also allow for exact positioning before final tightening

The unit to be mounted is screwed onto the top of the arm and is securely locked using the knurled locking ring

The NF Series is the smallest in the Camera Arm family and provides a compact unit suitable for small and lightweight applications
