

PRODUCT RANGE

49-900-161 Digital Depth Gauge with hook

SPECIFICATION

Hardened stainless steel frame, depth base & hook

Range:	0-150mm/0-6"
Resolution:	0.01mm/0.0005"
Repeatability:	0.01mm
Accuracy:	+/- 0.03mm
Depth Base:	100mm x 6.65mm wide
Hook Protrusion:	5.0mm
Hook thickness:	2.0mm
Measuring speed:	max 1.5 meters per second
Operating temp:	5-40°C

SETTING & USE

Clean instrument prior to use, using a soft dry cloth
Press 'inch/mm' button to select required measuring units
Move slider until the measuring face of the hook touches the depth base
Press 'ZERO' button at this position, to zero the display ready for measuring
Direct depth measurements can be taken by using the outside face of the hook
Set the instrument as above, then add 2mm to the depth measurement indicated on the display when measuring the component

MAINTENANCE

Replace battery when display flashes
Keep away from strong magnetic fields
Prevent liquid material from getting into the slider
Keep caliper clean & dry

Do not mark instrument by engraving, etching or any other permanent marking method, as this will invalidate the warranty
